

# Track and Variant Services

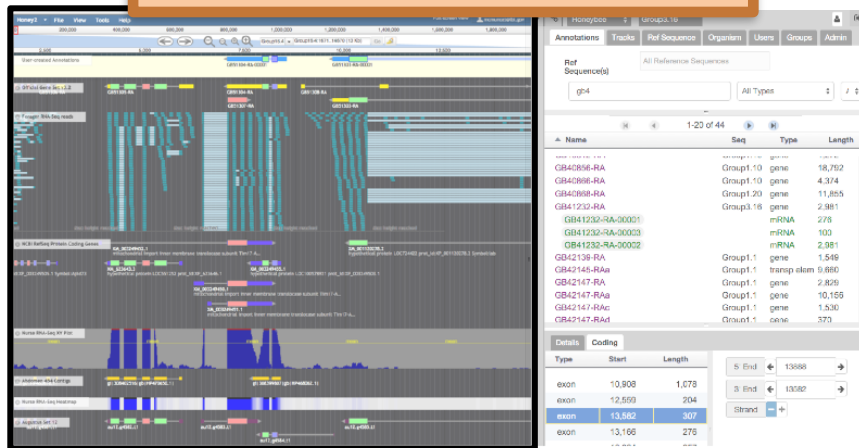

The diagram illustrates the integration of JBrowse, Apollo, and Ensembl for genomic data visualization. On the left, JBrowse is shown displaying a genomic track for BRCA1. In the center, Apollo is shown as a data source, with a central box highlighting the URL <https://github.com/GMOD/GenomeFeatureComponent>. On the right, Ensembl is shown providing genomic data and annotations. An orange box on the right says "Adding inline variants".

# Summary

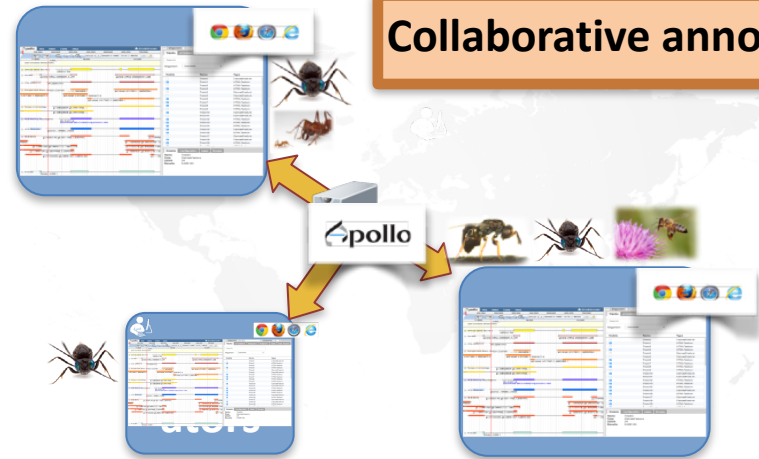

## Curators refine genome annotations

## Visual evidence and feedback

## Collaborative annotation

## Integrates within workflow
